DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of claims 1-10 and 19-25 in the reply filed on June 28, 2006 is acknowledged.

Priority

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Claim Objections

Claim 1 is objected to because of the following informalities: spelling of "dick" should read as disk. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 1 and 6,

After reviewing the disclosure and the drawings, as it pertains to the elected invention, it is not clear how the control signal is changed according to the difference between the bias voltage and the output voltage, since the disclosure and the drawings

as understood by the examiner compare the difference between the constant first signal and the analog second signal.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art (APA) in view of Fairgrieve (US 2004/0202216).

Regarding claims 1-3, 6-8, 19-24,

Figure 1 of APA illustrates a laser system for adjusting the power of a laser including a laser generator (24), a power adjusting circuit (22), a control end (17C), a reference signal end (17A) for receiving a constant bias voltage, a cross voltage output end (17B) and a differential amplifier for controlling the control signal (38).

Figure 1 does not illustrate controlling the control signal according to the output voltage.

Fairgrieve illustrates in figure 6 a laser system for adjusting the power of a laser including a laser (106), a laser driver (104) and a controller (304), which receives the output voltage of the laser via a filter (306) for controlling the power.

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to combine the feedback arrangement of Fairgrieve

in the laser system of APA because it will allow for monitoring the voltage drop of the laser and appropriately make adjustments paragraph [0007] of Fairgrieve.

Regarding claims 4, 9,

APA illustrates in figure 1 obtaining the difference between a first signal (36A) and a second signal (36C).

Regarding claims 5, 10, 25,

APA illustrates in figure 1 a digital to analog converter (DAC) (30).
